SUMMARY

Meticulous Software Engineer with several years of experience designing, testing, and developing software. In-depth understanding of web technologies with focus on delivering innovative business solutions. Excels in fast-paced, high-energy and deadline-driven environment with willingness to take on additional tasks. Always keen to take on challenges.

SKILLS

- Java
- Python
- JavaScript
- TypeScript
- React
- Spring Boot
- Spring Security
- Microservices
- REST APIs
- Docker
- AWS S3
- MySQL
- PostgreSQL
- MongoDB
- Redis
- Oracle
- Kafka
- WebSockets
- JWT
- OAuth2
- System architecture
- Data structures
- Problem solving
- Event-driven Architecture
- Tailwind CSS
- Git
- Tailwind CSS

EXPERIENCE

SONETEL

Software Engineer

03/2023 to 05/2025

- Architected and developed file-manager microservice using Java Spring Boot from scratch, implementing generic file-management capabilities across multiple AWS S3 buckets with pre-signed URL functionality.
- Optimized API performance by 800% for specific use-cases through strategic caching implementation and database query optimization, reducing response times from seconds to milliseconds.
- Eliminated Kafka consumer lag to 0% by implementing multi-threading architecture in website verification microservice, preventing daily lag accumulation.
- Resolved critical payment processing issues affecting high-volume transactions, eliminating duplicate payment occurrences and fixing Alipay integration failures, ensuring 100% payment reliability.
- Reduced processing load by 40% through Redis caching for duplicate website events within 24-hour timeframes, optimizing resource utilization.
- Debugged event-driven architecture issues across microservices using Kafka, resolving cross-service communication problems and improving system reliability.
- Delivered projects including AI-powered call-recording summaries, automated workflows, PDF receipt generation, and CDR processing automation, improving service efficiency and user experience.

EDUCATION

BACHELOR OF TECHNOLOGY: COMPUTER SCIENCE AND ENGINEERING
Guru Gobind Singh Indraprastha University, New Delhi, India

08/2022

PROJECTS

- **The new social networking platform** - A platform to provide an alternative to existing social networking platforms. Having multiple post types like blogs, media posts, notes, polls. Highly event-driven. Still in progress. (Code: <https://github.com/Aaarish/the-new-social-network>)
- **The club application** - A platform to create closed groups with invite-only joining process where members can create and track tasks with deadlines. (Code: <https://github.com/Aaarish/the-club-application>)
- **Duostudio** - A planning platform having two scratchboards with different board types like freestyle, flowchart, text. Needs to add user-data persistence and management. (Live: <https://duostudio-phi.vercel.app/>) (Code: <https://github.com/Aaarish/duostudio>)
- **Blueprint** - Project Collaboration Platform providing an interface to create and find projects to join or watch, for collaborative learning. (Code: <https://github.com/Aaarish/blueprint-backend> , <https://github.com/Aaarish/blueprint-frontend>)
- **Electronic Store** - E-commerce Backend, Built scalable e-commerce backend application using Java Spring Boot incorporating product catalog and shopping cart functionality. (Code: <https://github.com/Aaarish/electronic-store>)
- **Hotel Review Platform** - Microservices Architecture, Developed backend of microservices-based application using Java Spring Boot consisting of three independent microservices: user-service, hotel-service, and rating-service.
- **Services Search Platform (The Helper)** - A marketplace connecting service providers (electricians, plumbers, carpenters, masons, painters, cleaners) with customers through streamlined profile creation and search functionality. (Code: <https://github.com/Aaarish/the-helper>)
